

PIC[®] Boron Nitride Wax Stick

Boron nitride wax stick is used in aluminum extrusion process. It can effectively prevent aluminum pickup from extrusion pad and relevant parts, and overcomes the traditional release agents, such as grease, graphite and other pollutive products at the same time.

The stick is a white rod solid. It has excellent stability and lubricity at high temperature. So it can extend service life of dummy block, reduce maintenance time and increase production efficiency and make the crush zone safer and cleaner.

ADVANTAGES:

- Non-toxic
- Excellent stick resistance, lubricity and releasing at high temperature
- Excellent thermal conductivity, high melting point

APPLICATIONS:

Aluminum extrusion process.

SPECIFICATIONS:

Grade	Boron Nitride Wax Stick
Physical Form	Solid at room temperature
Smell	Odorless
Appearance	White Solid
Solubility	Insoluble in water
Specific Gravity	0.95 -1.05
Dimensions	OD: 70 mm, Length: 110 mm
Packing	10 PCS/Carton
Shelf Life	> 12 Months
